Assignment 09

1.

each block
size = 1 word / 4 bytes32 bit memory address
and initially empty

16 blocks cache

A. Total blocks in cache = 16

Each block size = 1 word

Tag field

$$\Rightarrow 2^N = 16$$

$$\Rightarrow 2^{m+2} = 2^2 \text{ (4 bytes)}$$

$$\text{size} = 32 - (4 + 2)$$

$$N = 4$$

$$\Rightarrow m + 2 = 2$$

$$= 26 \text{ bits}$$

index, $N = 4 \text{ bits}$

= byte offset

Decimal Addr memo	Binary Address	Hit/ Miss	Cache Block
2	0000 0000 0000 0000 0000 0000 0000 0010	Miss	0000
3	0000 0000 0000 0000 0000 0000 0000 0011	Hit	0000
170	[25 05] 1 0001 10	Miss	0001
45	[26 05] 1011 01	Miss	1011
7	[26 05] 0001 11	Miss	0001
196	[24 05] 11 0001 00	Miss	0001
189	[24 05] 10 1111 01	Miss	1111
191	[24 05] 10 1111 11	Hit	1111
215	[24 05] 11 0101 11	Miss	0101
172	[24 05] 10 1011 00	Miss	1011
45	[26 05] 1011 01	Miss	1011
187	[24 05] 10 1110 11	Miss	1110
254	[24 05] 11 1111 10	Miss	1111

①	Index	V	Tag	Data
0	0000	Ø 1	0000 0000 0000 0000 0000 0000 00	Mem[2]
1	0001	Ø 1	[25 05] 1 [26 05] [29 05] 11	Mem[2196] Mem[2197]
2	0010	0

(iii)

$$b. \text{ Hit Ratio} = \frac{\text{hits}}{\text{accesses}} = \frac{2}{13}$$

$$\text{Miss Ratio} = 1 - \text{Hit Ratio} = 1 - \frac{2}{13} = \frac{11}{13}$$

$$c. \text{ Total number of bits} = 2^n \times (\text{block size} + \text{tag size} + \text{valid field size})$$

$$2^n = \text{Total blocks in cache} = 16 \text{ blocks}$$

$$\text{block size} = 2^m \times 32$$

↓
bit address

$$= 2^0 \times 32$$

$$= 16 \times (2^0 \times 32 + 26 + 1)$$

$$= 944 \text{ bits}$$

(Ans)

$$\text{tag size} = \text{bit address} - (\text{index} / n + \text{byte offset})$$

$$= 32 - (4 + 2) = 26$$

$$\text{valid field size} = 1 \text{ bit}$$

$$d. \text{ size of Cache} = 2^N$$

$$= 2^4$$

$$= 16$$

(Ans)

2

2. $P = 32$ bytes, each page = 2 bytes, 64 frames

each frame = 2 bytes = each page

A. Each 2 bytes \rightarrow 1 page

1 bytes $\rightarrow \frac{1}{2}$ "

32 bytes $\rightarrow \frac{32}{2} = 16$ page

B. each frame = each page = 2 bytes

$\therefore 64$ frames = $2 \times 64 = 128$ bytes

C. Page # Byte Address

0	0	1
1	2	3
2	4	5
3	6	7
4	8	9
5	10	11
6	12	13
7	14	15
8	16	17
9	18	19
10	20	21
11	22	23
12	24	25
13	26	27
14	28	29
15	30	31

Frame	Main Memory		Page No
7	14	15	0
9	18	19	1
11	22	23	2
13	26	27	3
15	30	31	4
17	34	35	5
19	38	39	6
21	42	43	7
23	46	47	8
25	50	51	9
27	54	55	10
29	58	59	11
31	62	63	12
33	66	67	13
35	70	71	14
37	74	75	15

Page Table

Page No	Frame No
0	7
1	9
2	11
3	13
4	15
5	17
6	18 19
7	21
8	23
9	25
10	27
11	29
12	31
13	33
14	35
15	37

0. byte 8 of the process:

Logical Address

Page (4 bit)

Page offset (1 bit)

For:

Page = 16, 4 bit
required to map/
get page address

As 2 byte in a page
1 bit is for page
offset

(5)

E. Physical Address:

Frame # numbers = 64

bits required to reach 64 bits - $2^N = 64$
 $\Rightarrow 2^N = 2^6$
 $N = 6$

\therefore Frame # = 6 bits

As each frame has 2 spots, 0 or 1, 1 bit is enough for frame offset.

Physical Address of byte number 8 of the process

001111	0
Frame # (6 bits)	Frame offset (1 bit)

(Ans)
